When is FlexPlant going to be available. I heard that the 3D package will be stand alone. What will it do differently than 3dX?

Flexplant will available sometime during 2007. According to the boss man there is not an exact date. He wants to make sure everything is just reight before releasing it to the public. Yes the 3D program will be stand alone. Besides have a few extra bells and whistles it will also be more accurately dropping Iso's and Orthos from the 3D model. SShould be pretty cool stuff.

Flexcad is in the process of being made to work with Autocad 2008. I am guessing it will be ready in a couple of weeks. They are also working on making work with Vista. That should also be ready soon. The developers had to upgrade Flexcad to run on a 64 bit platform with Vista.

OK, OK. FlexCad is working with Autocad 2008 now. It has to be the 32 bit version though. FlexCAD will be running on Vista soon which means it will be 64 bit compatible. The developers are waiting on their Rainbow license to be updated. This should happen within the the next couple of weeks.
